advanced

Advanced UK – 29 years of service to the Transportation and Logistics sector

Technology Experts for Transportation & Logistics

You want to grow your business, but the competition is fierce. When you automate business processes, you free employees to focus on your customers, and your business gains hugely increased productivity.

We combine RPA, cognitive capture, process orchestration, mobility and engagement, and analytics to ease implementations and deliver dramatic results that mitigate compliance risk and increase competitiveness, growth and profitability.

With a comprehensive and industry-leading array of software technologies, Advanced UK can quantify the potential gains and demonstrate practical solutions. No longer is Robotic Process Automation only for the industry giants: your business too can leverage the best-of-class technology to enable you to compete.

WE UNDERSTAND YOUR INDUSTRY

Manual processes and wafer-thin margins are the biggest hurdles to the T&L industry, and yet 76% of firms use labour intensive and error prone manual systems for their key customer-facing processes, such as scheduling and customer status updates.

For the smaller firm, competitiveness demands you use the same technology as the industry giants: Robotic Process Automation. It's within your reach!

Are you one of the 32% of transportation & logistics companies which rely on manual steps in more than 50% of their processes?

A changing sector

Manual processes are error prone and inefficient, and yet 32% of transportation and logistics companies rely on human touchpoints in more than 50% of their processes. This holds back your ability to handle business growth and the associated transaction volume.

Your specialist technology partner

Of prime importance to you, we've built our business in part on our experience and understanding of your industry: we have an extensive portfolio of clients across the transportation and logistics sector, whether it be for our provision of leading solutions for print, process automation, data sharing, workflow, or spearheading business transformation in the dated back-office functions which hurt profitability.

RPA: the future is today!

The industry has relied upon traditional integration methods, such as electronic data integration (EDI), but these approaches are expensive to manage and rarely deliver increased efficiency.

By introducing RPA-based intelligent software robots, we'll help you to create a 'digital workforce' which helps your staff to streamline operations and expedite key business activities.

RPA eliminates time-consuming, manual copying and pasting of information between virtually any application or data source, including websites and portals, desktop applications and enterprise systems.

RPA is easy to use and can be deployed in a matter of weeks, not months, as it does not rely on the use of complex APIs and coding. Imagine being able to update your entire supply chain in real time!

Some of our clients

Our depth of experience

- **Managed Print Service** – reduce every aspect of the cost of print and the maintenance of your printers.

- **Document management** – solutions for instant and secure access to any document, from anywhere.

- **Software automation** – boost productivity and capacity by eliminating the human interaction with data.

- **Business continuity** – we'll guide you on strengthening your business to cope with the unexpected.

- **Security & Compliance** – from cyber security through to data protection and regulatory adherence, we have the solutions.
